Subject: R6 Assisting with Dimock Project

Cindy,

R6 has agreed to step in and assist us with the Dimock Project. Ethylene glycol is the one compound for which we did not have a demonstration of capability. Contract labs were used in February to complete this analysis. We had reached out to R6 prior to the February sampling; however, they were at capacity at the time. For the March sampling, R6 can accommodate the samples and will analyze for ethylene glycol and propylene glycol. Therefore, contract labs for the glycol analysis will not be used for the March sampling event.

Cindy
